Letter of Appreciation

Hello Dr Gotfryd,

I wanted to give you feedback on the Maxi Mind program that I enrolled my two daughters in last year.

My first daughter was "diagnosed" (I don't like labels!!) with ADD a couple years back. Last year, she joined the Maxi Mind pilot program in her school. The results were amazing!

We at home and all of her teachers noticed increased attention span, better concentration and all around much less frustration with her school work. She was always so happy to share with us the exercises she did in her program and her Maxi Mind teachers were amazing, professional and warm. She thrived tremendously.

My second daughter had what appeared to be some delayed learning issues. She wasn't progressing at the same pace as the rest of the class was and reading was a struggle for her. Of course this produced anxiety and boredom.

A few weeks into Maxi Mind we all started seeing results. Suddenly she was learning, reading and keeping up with the class. She was all around a happier child with reduced anxiety levels, especially when it came time for homework. There was a clear cognitive improvement. She also loved her Maxi Mind teacher and LOVED attending!

As a health professional and counselor who works with children, I give my full endorsement to the Maxi Mind program and the varied modalities they use to improve cognitive abilities. It is non-invasive and holistic, working to strengthen the child's natural abilities and develop new ones.

THANK YOU!
